# ONLINE SAFETY

To be safe online is kind of like being smart. To be safe is to make a strong password. Weak passwords will be easy for someone to steal. They can log in as you and change things and you wouldn't notice. In order to make a strong password you have to have at least 8 upper case letters, 5 lower case letters, and 6 numbers. You might think it is too much for you to remember but it is actually safe for you.

# ONLINE SAFETY!!!

## *BE SMART ONLINE!*

*To be smart online is not that hard.*

*You should NEVER type anything you wouldn't tell a stranger. Also be careful about what you type it could be changed and you wouldn't even notice. Also it could embarrass you whole life, and you wouldn't want your life to be ruined*

*When you TM you should BE NICE. If anyone tries to get you mad or annoyed, try your very best to ignore it. If you reply back it might create a bigger problem than it's supposed to be. If the person is getting out of control tell an adult like a teacher, parent, or any other adult that you know or trust.*

## *BE SUPPORTIVE*

*To be supportive you have to be nice. If you see someone cyber bullying tell them to stop .*

*Don't just get in the conversation and start saying bad things too. It will hurt the person `s feelings. Instead say nice things about them like "Your hair looks nice." and other things. When you are supportive you make someone feel good about themselves when they are happy it also make you feel happy and proud .*

*When you have good behaviour and you show it to other people you are making yourself look good in front of other people so the think well about you.*

*These are all about online safety. follow them and you will have a good life online.*
