

Cyberbullying is bullying outside of school but on digital devices. Cyberbullying is not kind and is disrespectful to other people that you know or might not know. Cyberbullying can happen anytime and uses devices like computers, cell phones ,laptops(similar to computers but smaller)video games and blogs(not a device but mean words or pictures can appear). Cyberbullying is bad so please don't do it at home. Cyberbullying is also rude so,if you get a message like"where do you live"do not respond just delete the message and block the person who sent the message to you. Additionally,if you get the same message like "where do you live"always check who's message it is because it might be one of your family members asking where you moved or where you live because they came from a different country or maybe they've never been to your house. Cyberbullying also might affect your attitude at school. For instance,if someone sends you a horrible message,you might start being rude and disrespectful to almost EVERYBODY.

Cyberbullying is not cool so please do not do it everywhere you go.You could get in trouble,so please don't do it with any devices you have.
