

What to do when you are being cyber bullied online.

By: Christian

Things you should do

- First, if you're getting cyber bullied you might get mean messages. One thing you could probably do is ignore or report them.

Passwords and Emails

- Keep a strong password that you can remember. Also, remember to never say your private things out loud.

Messaging

- Sometimes messages can get you angry but you could just block messages or get offline and ignore those people.

Strangers

- When you're texting or talking you should talk to your friends only not other people you don't know.
